

## Directions for Hoop Glider

### You will need:

- a regular plastic drinking straw
- 3 x 5 inch index card (or stiff paper)
- tape
- scissors

### How to build it:

1. Cut the index card or stiff paper into three separate pieces that measure 1 inch by 5 inches.
2. Tape two of the pieces end to end to make a loop. Be sure to overlap the pieces a little bit so they hold a nice loop shape.
3. Use the last strip of paper to make a smaller loop by taping its ends together. (Again, allow a little overlap so it holds the loop shape.)
4. Tape the large loop near one end of the straw and the small loop near the other end. The straw should be on the inside of the loops.
5. Now you are ready to try your hoop glider! Hold it in the middle of the straw with the hoops on top and throw it similar to how you would throw a dart, angled slightly up.
